RE: Carpinteria Creek Watershed Restoration Project Augmentation  
File No. 03-021-04

Dear Chairman Bosco:

At its meeting of November 9, 2009, the Board of Trustees of the Land Trust for Santa Barbara County voted unanimously to support the Coastal Conservancy staff recommendation to redirect existing under its Grant Agreement No. 06-012 (Arroyo Hondo Creek Fish Passage Project) to include in the scope of work the biotechnical bank stabilization project on Carpinteria Creek.

The Land Trust has the staff resources and experience with similar projects necessary to oversee the subcontractor work needed to complete this important local project. Assuming the Conservancy board approves of this augmentation proposal, the Land Trust will work with your staff and Earth Island Institute (EII) to prepare a project management agreement and revised scope of work, timeline and budget.

The revised grant agreement and project management agreement with EII will require final approval by the Land Trust Board of Trustees before any work commences.

We appreciate the Coastal Conservancy's continued support of coastal habitat protection and restoration efforts, and look forward to another successful outcome.

Sincerely,

Michael Feeney  
Executive Director
